Dear Esther

I am the mother of a 3yr old and will live within 50 feet of the LA River. The LA River is periodically sprayed with Round-Up and other pesticides. They spray one on top of the other and no one does any testing to see how they are effecting each other. I know this because I spoke with an official at the LA River Flood Control and he gave me the info. Here is a list of 7 that they use:

- Roundup Concentrate
- Roundup Custom
- Gallery
- Oust
- Proclipse
- Telar XP
- Dimension Ultra 40WP

There is no safe level of glyphosate. And when you have city officials such as LA Flood Control mixing them what then do we have? A toxic soup.

Glyphosate is linked to cancer in humans and animals, birth defects, miscarriages, infertility and are extremely toxic to aquatic life and have high mobility in the environment. Glyphosate is most toxic to children like my 3 yr old son.

There is NO SAFE LEVEL. Glyphosate must be banned.

Sincerely,
Rebecca Heinemann
Studio City CA
